

Lecture 8 - Floating Point Arithmetic, The IEEE Standard

MIT 18.335J / 6.337J
Introduction to Numerical Methods

Per-Olof Persson (persson@mit.edu)

October 3, 2007

1

Floating Point Formats

- Scientific notation:

$$\underbrace{-}_{\text{sign}} \underbrace{1.602}_{\text{significand}} \times \underbrace{10}_{\text{base}} \underbrace{-19}_{\text{exponent}}$$

- Floating point representation

$$\pm (d_0 + d_1\beta^{-1} + \dots + d_{p-1}\beta^{-(p-1)})\beta^e, \quad 0 \leq d_i < \beta$$

with base β and precision p

- Exponent range $[e_{\min}, e_{\max}]$
- Normalized if $d_0 \neq 0$ (use $e = e_{\min} - 1$ to represent 0)

2

Floating Point Numbers

- The gaps between adjacent numbers scale with the size of the numbers
- Relative resolution given by *machine epsilon*, $\epsilon_{\text{machine}} = .5\beta^{1-p}$
- For all x , there exists a floating point x' such that $|x - x'| \leq \epsilon_{\text{machine}}|x|$
- Example: $\beta = 2, p = 3, e_{\min} = -1, e_{\max} = 2$

3

Special Quantities

- $\pm\infty$ is returned when an operation overflows
- $x / \pm\infty = 0$ for any number x , $x/0 = \pm\infty$ for any nonzero number x
- Operations with infinity are defined as limits, e.g.

$$4 - \infty = \lim_{x \rightarrow \infty} 4 - x = -\infty$$

- NaN (Not a Number) is returned when the an operation has no well-defined finite or infinite result

- Examples: $\infty - \infty, \infty/\infty, 0/0, \sqrt{-1}, \text{NaN} \odot x$

4

Denormalized Numbers

- With normalized significand there is a "gap" between 0 and $\beta^{e_{\min}}$
- This can result in $x - y = 0$ even though $x \neq y$, and code fragments like **if $x \neq y$ then $z = 1/(x - y)$ might break**
- Solution: Allow non-normalized significand when the exponent is e_{\min}
- This *gradual underflow* guarantees that

$$x = y \iff x - y = 0$$

5

IEEE Single Precision

- 1 sign bit, 8 exponent bits, 23 significand bits:

0	00000000	00000000000000000000000000000000
S	E	M

- Represented number:

$$(-1)^S \times 1.M \times 2^{E-127}$$

- Special cases:

	$E = 0$	$0 < E < 255$	$E = 255$
$M = 0$	± 0	Powers of 2	$\pm\infty$
$M \neq 0$	Denormalized	Ordinary numbers	NaN

6

IEEE Single Precision, Examples

S	E	M	Quantity
0	11111111	000001000000000000000000	NaN
1	11111111	00100010001001010101010	NaN
0	11111111	000000000000000000000000	∞
0	10000001	101000000000000000000000	$+1 \cdot 2^{129-127} \cdot 1.101 = 6.5$
0	10000000	000000000000000000000000	$+1 \cdot 2^{128-127} \cdot 1.0 = 2$
0	00000001	000000000000000000000000	$+1 \cdot 2^{1-127} \cdot 1.0 = 2^{-126}$
0	00000000	100000000000000000000000	$+1 \cdot 2^{-126} \cdot 0.1 = 2^{-127}$
0	00000000	000000000000000000000001	$+1 \cdot 2^{-126} \cdot 2^{-23} = 2^{-149}$
0	00000000	000000000000000000000000	0
1	00000000	000000000000000000000000	-0
1	10000001	101000000000000000000000	$-1 \cdot 2^{129-127} \cdot 1.101 = -6.5$
1	11111111	000000000000000000000000	$-\infty$

7

IEEE Floating Point Data Types

	Single precision	Double precision
Significand size (p)	24 bits	53 bits
Exponent size	8 bits	11
Total size	32 bits	64 bits
e_{\max}	+127	+1023
e_{\min}	-126	-1022
Smallest normalized	$2^{-126} \approx 10^{-38}$	$2^{-1022} \approx 10^{-308}$
Largest normalized	$2^{127} \approx 10^{38}$	$2^{1023} \approx 10^{308}$
$\epsilon_{\text{machine}}$	$2^{-24} \approx 6 \cdot 10^{-8}$	$2^{-53} \approx 10^{-16}$

8

Floating Point Arithmetic

- Define $\text{fl}(x)$ as the closest floating point approximation to x
- By the definition of $\epsilon_{\text{machine}}$, we have for the relative error:
For all $x \in \mathbb{R}$, there exists ϵ with $|\epsilon| \leq \epsilon_{\text{machine}}$ such that $\text{fl}(x) = x(1 + \epsilon)$
- The result of an operation \otimes using floating point numbers is $\text{fl}(a \otimes b)$
- If $\text{fl}(a \otimes b)$ is the nearest floating point number to $a \otimes b$, the arithmetic *rounds correctly* (IEEE does), which leads to the following property:
For all floating point x, y , there exists ϵ with $|\epsilon| \leq \epsilon_{\text{machine}}$ such that
$$x \otimes y = (x * y)(1 + \epsilon)$$
- Round to nearest even in the case of ties

9
